

E-Commerce Mobile App Requirements

Overview

We are looking to develop a new mobile application for our clothing brand, "Urban Threads". The primary goal is to provide a seamless shopping experience for our existing customer base and attract new mobile-first shoppers.

Supported Platforms

- iOS (iPhone)
- Android

Core Features

1. **Product Catalog**
 - High-resolution image galleries
 - Advanced filtering (Size, Color, Price, Style)
 - "Out of stock" indicator
2. **User Accounts**
 - Social login (Google, Apple)
 - Order history and tracking
 - Wishlist functionality
3. **Shopping Cart & Checkout**
 - Multiple payment gateways (Credit Card, UPI, Apple Pay, Google Pay)
 - Address management
 - Promo code support
4. **Additional Requirements**
 - Push notifications for new arrivals and sales
 - Admin dashboard to manage inventory and view orders

Project Scope & Budget

- **Timeline:** We need the MVP ready within 8-10 weeks.
- **Scale:** We expect around 5,000 active users in the first month and have an initial catalog of roughly 200 items.
- **Budget:** We are flexible but are looking for a realistic estimate based on the features listed above.

Questions for the Agency

- Can you integrate with our existing Shopify backend?
- Do you provide post-launch maintenance, and how much does it cost?
